

BARRIGEL CREATES SPACE
between the prostate and the rectum, moving the healthy organ out of the radiation beam exposure

Radiation therapy can greatly improve your prognosis and quality of life following a cancer diagnosis, but can also affect surrounding healthy tissue and may result in long-term complications.

Due to its close proximity to the prostate, the rectum is most at risk for exposure to radiation. Possible long-term side effects include bowel problems such as rectal swelling, pain, hemorrhoids, and/or diarrhea.

Barrigel rectal spacer can help minimize these side effects by temporarily positioning the rectum away from the prostate, and remains in place throughout the course of your radiation treatment.¹

PROVEN SAFE AND EFFECTIVE

In an FDA clinical study, **98.5%** of patients showed Barrigel to be effective in achieving **significant reduction in radiation to the rectum.**¹

At 6 months, **patients with Barrigel experienced significantly fewer long-term side effects** than patients who did not receive Barrigel.²
